Temporary Wall Systems

Our **Loft Wall** provides optimal privacy without the confined feeling of being in a small space. It is designed to reach a height below the ceiling to permit the flow of air and allow light to enter.

Usually the Loft Wall is 7 feet high and has a door. [Most buildings have 8' ceiling, so there'll be a foot clearance between the partition and the ceiling, for lighting and ventilation].

We can adapt the Loft Wall to fit any space or layout, including L-shaped and T-shaped walls. It is ideal for apartments or other leased spaces as it can be used to create a new bedroom or a separate office.

The Loft Wall is temporary and can be leased for up to three years. It will be removed free of charge.
